Google AdSense High-RPM Publisher & Layout Engineering Play

Category: Google AdSense • Lead Mentor: Nasir (10-Year AdSense Veteran) • Licensed for Educational Study

1. The Economics of RPM, eCPM and CPC

- RPM = (Estimated Earnings / Page Views) * 1000. Influenced directly by Tier-1 GEO mix, CTR, and advertiser CPC.
- Tier-1 Traffic Value: Visitors from US, UK, Canada, and Australia command 5x-10x higher bid pressure.
- Active View Viewability: Ad networks penalize impressions below 70% active viewability.

2. High-Yield Layout Placement Physics

- Sticky Sidebar Unit (300x600): High active view time when users read long-form technical tutorials.
- In-Article Native Placements: Insert responsive banners every 4-5 paragraphs where attention naturally rests.
- Policy Compliance: Never place ads directly touching buttons or mislabeled as interactive application content.

3. Protecting Your AdSense Account

- Strict adherence to Google Webmaster & Publisher policies regarding invalid traffic (IVT).
- Monitor Google Analytics 4 for abnormal traffic spikes or low session durations from untrusted referral sources.
- Maintain complete Ads.txt records with verified publisher ID to prevent domain spoofing.
