UI/UX Design Fundamentals & Visual Hierarchy Guide

Category: Graphic Design • Lead Mentor: Nasir • Licensed for Educational Study

1. Visual Hierarchy & Typographic Scale

- The 8-Point Grid System: Maintain spatial rhythm by sizing margins, padding, and gaps in multiples of 8px.
- Typographic Hierarchy: Clear distinction between H1 (display), H2 (section), H3 (card), and body copy.
- Line Length & Readability: Optimal reading line length is between 55 and 75 characters per line.

2. Color Psychology & Contrast Compliance

- 60-30-10 Color Rule: 60% dominant neutral background, 30% structural secondary, 10% high-contrast accent.
- WCAG 2.1 AA Compliance: Text must maintain at least 4.5:1 contrast ratio against background for readability.
- Zero-Pill Discipline: Avoid wrapping every metadata tag in rounded pills; use typographic weight and subtle badges.
